Sri chaitanya jr college	tirupati
9.37	
SSC	2015
bhashyam public high school	tirupati
8.3	

SKILLS

- MY SQL
- HTML
- JAVA
- CSS
- BASICS OF JAVA SCRIPT

PROJECTS

Student Management System

I created a simple Java program that helps manage student information, like adding new students, updating their details, and removing them if needed. The program runs in the command line and shows a menu to guide the user step by step. It stores student data in a file, so the information is saved even after closing the program. I used basic Java concepts like classes, objects, and lists to organize the code. The system also checks for mistakes in the user input and handles them smoothly. This project helped me understand how to build real-world applications using core Java in a clean and structured way
